

QA Report 07: Admin Portal (Ubn-API-Portal-Admin)

Project: OneCluster UBN Platform **Report ID:** QA-RPT-007 **Sprint Period:** March 31 - April 9, 2026 **Prepared By:** QA Team **Date:** April 9, 2026 **Status:** PASS (with noted issues)

1. Executive Summary

This report covers quality assurance testing for the Admin Portal (Ubn-API-Portal-Admin), the internal-facing management interface for the UBN platform. The Admin Portal enables bank operations staff to manage partner onboarding (KYB review), vendor lifecycle management, role-based access control, system health monitoring, and API catalog administration.

During this sprint, 43 commits were merged with significant feature additions including completed billing screens, the renaming of Operations SIAs to SLAs, token/logo fixes, and KYB detail modal improvements. All 25 Playwright UI test cases passed against the dev-admin.onecluster.co environment. Three issues were identified: missing security headers (PEG-377), incorrect page title showing "Create Next App" (PEG-385), and the API catalog being publicly accessible without authentication (PEG-378).

2. Scope

Components Under Test

Component	Description
Login + MFA Flow	Admin user authentication with multi-factor authentication
KYB Review Queue	Partner Know-Your-Business application review list
KYB Case Detail Modal	Detailed view of individual KYB submissions
Vendor Management	Partner suspend/unsuspend lifecycle controls
Roles & Permissions	RBAC matrix for admin user access control
System Health Monitoring	Service status dashboard for platform components
API Catalog Management	CRUD operations for API product definitions
Billing Screens	Partner billing and invoice management (NEW)
SLA Operations	Service Level Agreement tracking (renamed from SIA)

Test Environment

Property	Value
URL	https://dev-admin.onecluster.co
Test Framework	Playwright
Browser Matrix	Chromium (primary), Firefox, WebKit
Test Data	Seeded admin accounts with various RBAC roles

3. Changes This Sprint

Total Commits: 43

Change	Description	Impact
--------	-------------	--------

Billing screens completed	Full billing management UI with invoice listing, payment history, and partner billing configuration	High — new feature area
Operations SIAs renamed to SLAs	Terminology alignment across the platform from "SIA" to "SLA"	Low — cosmetic, but affects navigation and labels
Token/logo fix	Corrected authentication token handling and logo rendering issues	Medium — visual and auth impact
KYB detail modal improvements	Enhanced layout, document preview, and approval/rejection workflow in the KYB case detail modal	Medium — improves reviewer workflow
Navigation updates	Sidebar menu restructuring to accommodate new billing and SLA sections	Low — UI layout change

4. Test Results

4.1 Playwright UI Tests

Environment: dev-admin.onecluster.co **Result:** 25/25 PASS

Test ID	Test Case	Expected	Actual	Status	Notes
ADM-001	Login page renders	Login form with email and password fields	Form rendered correctly	PASS	—
ADM-002	Valid admin login	Redirect to dashboard	Dashboard loaded	PASS	JWT stored in httpOnly cookie
ADM-003	Invalid credentials rejection	Error message displayed	"Invalid credentials" shown	PASS	No credential leakage
ADM-004	MFA prompt after login	MFA code input displayed	MFA input shown	PASS	6-digit OTP field
ADM-005	Valid MFA code submission	Access granted to dashboard	Dashboard accessible	PASS	—
ADM-006	Invalid MFA code rejection	Error message, retry allowed	Error shown, retry available	PASS	Max 3 attempts enforced
ADM-007	KYB Review Queue loads	List of pending KYB applications	Queue populated	PASS	Pagination working
ADM-008	KYB Queue filtering	Filter by status (pending/approved/rejected)	Filters applied correctly	PASS	—
ADM-009	KYB Case Detail Modal opens	Modal with partner details, documents	Modal rendered with all sections	PASS	Document preview loads
ADM-010	KYB Approve action	Status updated to Approved	Status changed, notification sent	PASS	Audit log entry created
ADM-011	KYB Reject action with reason	Status updated to Rejected, reason stored	Rejection recorded	PASS	Reason field required

ADM-012	Vendor list loads	Table of registered partners	Partners listed with status indicators	PASS	—
ADM-013	Vendor suspend action	Partner status set to Suspended	API access revoked immediately	PASS	Confirmation dialog shown
ADM-014	Vendor unsuspend action	Partner status set to Active	API access restored	PASS	—
ADM-015	Roles & Permissions page loads	RBAC matrix displayed	Matrix rendered correctly	PASS	All roles visible
ADM-016	Role assignment	Assign role to admin user	Role updated in user record	PASS	Permission changes immediate
ADM-017	Permission enforcement — unauthorized action	Action blocked with 403	Access denied message shown	PASS	RBAC enforced client and server side
ADM-018	System Health dashboard	Service status indicators	All monitored services shown	PASS	Color-coded status (green/red/yellow)
ADM-019	API Catalog listing	List of available API products	Products displayed with metadata	PASS	—
ADM-020	API Catalog — create product	New product appears in catalog	Product created successfully	PASS	Form validation working
ADM-021	API Catalog — edit product	Product details updated	Changes saved and reflected	PASS	—
ADM-022	Billing screen — invoice list	Partner invoices displayed	Invoices listed with amounts and dates	PASS	NEW feature this sprint
ADM-023	Billing screen — payment history	Payment records with status	History loaded correctly	PASS	NEW feature this sprint
ADM-024	SLA Operations page	SLA metrics and tracking (renamed from SIA)	Page loads with correct "SLA" labeling	PASS	Terminology updated throughout
ADM-025	Session timeout handling	Redirect to login after inactivity	Auto-redirect after 30 min idle	PASS	Warning shown at 25 min

5. Issues Found

Issue ID	Severity	Title	Status	Description
PEG-377	Medium	Missing security headers on Admin Portal responses	Open	The following HTTP security headers are absent from responses: X-Content-Type-Options, X-Frame-Options, Content-Security-Policy, Strict-Transport-Security. This exposes the admin portal to

				clickjacking, MIME-type sniffing, and other client-side attacks. Should be configured at the Next.js middleware or reverse proxy level.
PEG-385	Low	Page title shows "Create Next App" instead of portal name	Open	The HTML <title> tag on all pages displays the default Next.js boilerplate title "Create Next App" instead of "OneCluster Admin Portal" or a page-specific title. This affects browser tab identification and SEO (though SEO is not a concern for an internal tool, it is unprofessional in appearance).
PEG-378	High	API Catalog pages accessible without authentication	Open	The /catalog and /catalog/[productId] routes are accessible without a valid admin session. An unauthenticated user can view the full API product catalog including endpoint specifications, pricing tiers, and integration documentation. This should be behind the authentication middleware.

6. Recommendations

- PEG-378 — Authentication on Catalog (High Priority):** Add authentication middleware to all `/catalog` routes immediately. Even if catalog information is not classified, unauthenticated access to the admin portal sets a dangerous precedent and may expose internal pricing or unreleased API product details.
- PEG-377 — Security Headers:** Implement security headers via Next.js middleware (`next.config.js` headers configuration) or at the reverse proxy level. Recommended headers:
 - `X-Content-Type-Options: nosniff`
 - `X-Frame-Options: DENY`
 - `Content-Security-Policy: default-src 'self'`
 - `Strict-Transport-Security: max-age=31536000; includeSubDomains`
 - `X-XSS-Protection: 1; mode=block`
- PEG-385 — Page Titles:** Update the Next.js layout or individual page metadata to reflect proper page titles. This is a quick fix in the root `layout.tsx` or via the `metadata` export in each page component.
- RBAC Audit:** Conduct a manual review of the RBAC permission matrix to ensure the principle of least privilege is applied. Verify that roles like "Viewer" cannot inadvertently trigger state-changing operations.
- Billing Screen Testing:** The new billing screens should receive additional testing with edge cases: empty invoice lists, large payment histories (pagination), and currency formatting for NGN values.
