

Test Evidence — Logs & Execution Artifacts

Project: Pegasus BaaS Platform **Date:** 2026-04-09 **Environment:** Development (dev-*.onecluster.co) **Test Framework:** Playwright (Node.js) **Execution Mode:** Headless (CI-compatible)

1. Test File Inventory

All Playwright test files are located under `qa-tests/tests/`.

#	Test File	Path	Test Count	Result
1	Partner Portal UI	qa-tests/tests/auth/partner-portal-ui.spec.js	58	ALL PASS
2	Gateway API (Production)	qa-tests/tests/gateway/gateway-api.spec.js	23	ALL PASS
3	Dev Gateway API	qa-tests/tests/gateway/dev-gateway-api.spec.js	18	ALL 502 (dev gateway down)
4	Banking API	qa-tests/tests/banking/banking-api.spec.js	18	15 PASS / 3 BLOCKED (mTLS)
5	Admin Portal UI	qa-tests/tests/admin/admin-portal-ui.spec.js	25	ALL PASS
6	Dev Admin API	qa-tests/tests/admin/dev-admin-api.spec.js	21	ALL PASS
7	Dev Services Direct	qa-tests/tests/e2e/dev-services-direct.spec.js	19	ALL PASS

Totals: 182 tests executed | 161 PASS | 18 x 502 (infrastructure) | 3 BLOCKED (mTLS)

2. Sample Test Output Logs

2.1 Health Check — Admin Gateway

```
$ curl -s -o /dev/null -w "%{http_code}" https://dev-api-admin.onecluster.co/health
200

$ curl -s https://dev-api-admin.onecluster.co/health
Healthy
```

2.2 Status Endpoint — Admin Gateway

```
$ curl -s https://dev-api-admin.onecluster.co/status | jq .
{
  "status": "OK",
  "timestamp": "2026-04-09T14:23:17.442Z",
  "message": "Admin Gateway is running..."
}
```

2.3 Auth Validation — Invalid Credentials

```
$ curl -s -X POST https://dev-api-admin.onecluster.co/api/auth/validate-email-password \
-H "Content-Type: application/json" \
-d '{"email":"invalid@test.com","password":"wrongpass"}' | jq .
{
  "message": "Invalid email or password"
}
```

HTTP Status: 401 Unauthorized

2.4 Registration Validation — Empty Body

```
$ curl -s -X POST https://dev-api-admin.onecluster.co/api/Auth/register \
-H "Content-Type: application/json" \
-d '{}' | jq .
{
  "type": "https://tools.ietf.org/html/rfc7231#section-6.5.1",
  "title": "Unprocessable Entity",
  "status": 422,
  "detail": "Field 'companyName' is required",
  "errors": {
    "companyName": ["The companyName field is required."],
    "email": ["The email field is required."],
    "firstName": ["The firstName field is required."],
    "lastName": ["The lastName field is required."]
  }
}
```

HTTP Status: 422 Unprocessable Entity

2.5 Login Failure — Invalid Credentials

```
$ curl -s -X POST https://dev-api-admin.onecluster.co/api/Auth/login \
-H "Content-Type: application/json" \
-d '{"email":"test@example.com","password":"wrong"}' | jq .
{
  "isSuccess": false,
  "responseCode": "999",
  "responseDescription": "Login failed. Please check your credentials and try again.",
  "value": null
}
```

HTTP Status: 200 OK **Note:** Login failures return 200 — this is a known deviation from REST conventions (see PEG-387).

2.6 Forgot Password

```
$ curl -s -X POST https://dev-api-admin.onecluster.co/api/Auth/forgotPassword \
-H "Content-Type: application/json" \
-d '{"email":"user@example.com"}' | jq .
{
  "isSuccess": true,
  "responseCode": "00",
}
```

```
"responseDescription": "Success",
"value": "If this email is registered, a reset link has been sent."
}
```

HTTP Status: 200 OK **Note:** Response is intentionally generic to prevent email enumeration.

2.7 Product Catalog

```
$ curl -s https://dev-api-admin.onecluster.co/api/catalog/products | jq .
{
  "products": [
    {
      "productId": "accounts-api",
      "name": "Accounts API",
      "description": "Create and manage customer bank accounts",
      "category": "Banking",
      "status": "Active",
      "version": "1.0.0"
    },
    {
      "productId": "payments-api",
      "name": "Payments API",
      "description": "Initiate and track payment transactions",
      "category": "Banking",
      "status": "Active",
      "version": "1.0.0"
    },
    {
      "productId": "collections-api",
      "name": "Collections API",
      "description": "Manage direct debit mandates and collections",
      "category": "Banking",
      "status": "Active",
      "version": "1.0.0"
    }
  ]
}
```

HTTP Status: 200 OK

2.8 Sandbox Demo Key

```
$ curl -s https://dev-api-partner.onecluster.co/api/v1/sandbox/demo-key \
-H "Authorization: Bearer <jwt_token>" | jq .
{
  "success": true,
  "data": {
    "apiKey": "ubn_sb_demo_key_XXXXXXXXXXXXXXXXXXXX",
    "environment": "SANDBOX",
    "expiresAt": "2026-04-10T14:23:17.000Z",
    "rateLimit": "100/minute"
  }
}
```

HTTP Status: 200 OK **Note:** Demo keys are ephemeral and auto-expire in 24 hours.

2.9 Sandbox BVN Verification

```
$ curl -s -X POST https://dev-api-partner.onecluster.co/api/v1/kyc/verify/bvn \
-H "Content-Type: application/json" \
-H "x-api-key: ubn_sb_demo_key_XXXXXXXXXXXXXXXXXXXX" \
-d '{"bvn":"2222222222","firstName":"John","lastName":"Doe","dateOfBirth":"1990-01-01"}' | jq .
{
  "success": true,
  "responseCode": "00",
  "responseDescription": "Verification successful",
  "data": {
    "verificationStatus": "FULL_MATCH",
    "bvn": "***",
    "firstName": "J***",
    "lastName": "D***",
    "matchDetails": {
      "firstNameMatch": true,
      "lastNameMatch": true,
      "dobMatch": true
    }
  }
}
```

HTTP Status: 200 OK **Note:** BVN is masked in response (PII scrubbing active). Sandbox returns synthetic data only.

2.10 Gateway Status — Production

```
$ curl -s https://api-partner.onecluster.co/status | jq .
{
  "gateway": "Ubn-Partner-Gateway",
  "version": "1.0.0",
  "status": "healthy",
  "routes": [
    "/api/v1/accounts/*",
    "/api/v1/payments/*",
    "/api/v1/collections/*",
    "/api/v1/kyc/*",
    "/api/v1/sandbox/*"
  ],
  "uptime": "14d 7h 23m"
}
```

HTTP Status: 200 OK

2.11 Dev Gateway — 502 Error

```
$ curl -s -o /dev/null -w "%{http_code}" https://dev-api-partner.onecluster.co/health
502

$ curl -s https://dev-api-partner.onecluster.co/health | head -20
<!DOCTYPE html>
<html>
```

```
<head>
  <title>502 Bad Gateway</title>
  <style>
    body { font-family: -apple-system, sans-serif; text-align: center; padding: 50px; }
    h1 { font-size: 50px; }
  </style>
</head>
<body>
  <h1>502</h1>
  <p>Bad Gateway – Cloudflare</p>
  <p>The web server reported a bad gateway error.</p>
  <p>Ray ID: 8f3a2b1c0d4e5f6a</p>
</body>
</html>
```

HTTP Status: 502 Bad Gateway **Root Cause:** Dev partner gateway service is not running on VPS. All 18 tests in `dev-gateway-api.spec.js` return 502.

3. Screenshot Policy

- **Playwright Configuration:** `screenshot: 'only-on-failure'` in `playwright.config.js`
- **Execution Mode:** Headless (no browser UI rendered)
- **Screenshots captured:** None — tests either passed (no screenshot taken) or returned HTTP errors (API-level, no visual)
- **UI test screenshots:** Not captured during this run as all 58 Partner Portal UI tests and all 25 Admin Portal UI tests passed
- **Recommendation:** Enable `screenshot: 'on'` for next full regression run to capture baseline screenshots

4. Confluence QA Documentation

#	Confluence Page	Space	Test Cases	Status
1	Partner Onboarding & KYB QA	PEGASUS > QA	112	Complete
2	KYC Verification QA	PEGASUS > QA	78	Complete
3	Accounts API QA	PEGASUS > QA	95	Complete
4	Payments API QA	PEGASUS > QA	88	Complete
5	Collections API QA	PEGASUS > QA	102	Complete
6	Partner Gateway & Security QA	PEGASUS > QA	91	Complete

Total: 6 Confluence pages | 566 test cases documented with:

- Test case ID
- Test description
- Preconditions
- Steps to reproduce
- Expected results
- **Actual results** (populated from test execution)
- Status (Pass / Fail / Blocked / Not Executed)
- **Notes** column with observations

5. Test Execution Environment

Parameter	Value
Node.js	v20.x
Playwright	1.42.x
Browser	Chromium (headless)
OS	Ubuntu 22.04 (CI runner)
Network	Direct (no VPN)
Test Runner	npx playwright test
Parallel Workers	1 (sequential for API stability)
Timeout	30s per test
Retries	0 (first-pass results)

6. Log Retention

- Playwright HTML report: qa-tests/playwright-report/index.html
- JSON results: qa-tests/test-results/results.json
- CI/CD logs: Available in GitHub Actions run history
- Confluence pages: Persistent (PEGASUS > QA folder)
